# Design Risk Assessment for Wastewater Infrastructure Standard Details

Connections and Developer Services

Design and Construction Requirements for Self-Lay Developments July 2020 (Revision v4.02)

Part of **ervia** group

#### **Background**

Technical Documentation has been developed by Irish Water's Connection and Developer Services which outlines the requirements for wastewater services infrastructure within developments.

Standard details have been developed to outline Irish water's requirements to developers in the provision of wastewater infrastructure that is to be installed in developments and that would be connected to Irish Water's networks and subsequently vested in Irish Water.

The aim is to provide details to Developers for wastewater infrastructure, which will outline design and construction requirements to ensure consistency in the provision of materials, equipment and workmanship, etc. The standard details will also provide the basis for developers' detailed design proposals for wastewater infrastructure, leading to the provision of infrastructure that is suitable for connection to Irish Water's networks and easy operation and maintenance of the new infrastructure.

The Standard Details are based on best practice within the water industry. They take account of the experience of Local Authorities in the provision of these services to new developments. They have been successfully used by Irish Water's own internal functions for a variety of projects and they are in line with water utility industry norms.

There are 58 No Standard Details dealing with wastewater infrastructure covering all aspects of such infrastructure. The standard details for wastewater infrastructure are contained in Document Number IW-CDS-5030-01.

Design Risk Assessments (DRA) have been prepared to outline the residual health and safety responsibilities of developers and their designers/contractors in the provision of infrastructure in accordance with the standard details and these are included in Document No IW-CDS-5030-02. The residual risks outlined herein shall be taken into account in the detailed design of wastewater infrastructure.

\_

## Design Risk Assessment For Wastewater Standard Details

The Standard Details show the acceptable typical details and outline the minimum standards that are required by Irish Water for the provision of wastewater pipes and related infrastructure which are to be connected to the Irish Water Network. The Standard Details shall be used in conjunction with the Design Risk Assessment that has been developed which identifies the risks that designers shall take into account in the detailed design of the wastewater pipes and related infrastructure to be connected to the Irish Water Network. The pipes and related infrastructure to be put in place within developments shall comply fully with these Standard Details. Ultimate responsibility (including, but not limited to, any losses, costs, demands, damages, actions, expenses, negligence and claims) for the detailed design, construction and provision of such pipes and related infrastructure shall rest entirely with the Developer, his/her Designer(s), Contractor(s) or other connected party. Irish Water assumes no responsibility for and gives no guarantees, undertakings or warranties in relation to the pipes and related infrastructure to be provided in accordance with these Standard Details.

## This Design Risk Assessment shall apply to the following Drawings:

| Detail No.             | Detail Title   | Rev. |
|------------------------|--|------|
| STD-WW-01              | Wastewater service connection maintenance responsibility   | 2    |
| STD-WW-02              | Typical layout for sewer within new developments   | 2    |
| STD-WW-03              | Drain & service connection pipework  | 2    |
| STD-WW-04              | Typical sewer / service pipe connection  | 2    |
| STD-WW-05              | Typical service layout indicating separation distances   | 2    |
| STD-WW-05A             | Wastewater service connection vertical separation distances  | 0    |
| STD-WW-06              | Restrictions on wastewater infrastructure works adjacent to trees  | 2    |
| STD-WW-06A             | Restrictions on new trees/shrubs planting adjacent to sewers   | 1    |
| STD-WW-07              | Trench backfill & bedding  | 2    |
| STD-WW-08              | Concrete protection slab, bed, haunch & surround to wastewater pipes   | 1    |
| STD-WW-09              | Blockwork manhole (<450mm dia.)  | 3    |
| STD-WW-10              | Pre-cast concrete manhole with cast in-situ base   | 3    |
| STD-WW-10A             | Pre-cast concrete manhole with pre-cast base   | 0    |
| STD-WW-10B             | Pre-cast concrete pumping station inlet manhole with cast in-situ concrete base  | 0    |
| STD-WW-10C             | Pre-cast concrete pumping station inlet manhole with precast concrete base   | 0    |
| STD-WW-11              | In-situ concrete manhole   | 3    |
| STD-WW-11A             | Cast in-situ concrete pumping station inlet manhole  | 0    |
| STD-WW-12              | Backdrop and cascade manholes  | 3    |
| STD-WW-13              | Private side inspection chamber  | 3    |
| STD-WW-14              | Thrust blocks for rising mains   | 2    |
| STD-WW-15              | Scour valve chamber (foul rising main ≤200mm dia.)   | 3    |
| STD-WW-16              | Sluice valve details for rising mains ductile iron (D.I.) pipe (<200mm dia.) (sheet 1 of 2)  | 4    |
| STD-WW-17              | Sluice valve details for rising mains polyethylene (P.E.) pipe (<200mm dia.) (sheet 2 of 2)  | 3    |
| STD-WW-18              | Air valve chamber (foul rising main ≤200mm dia.)   | 3    |
| STD-WW-19              | Duct chamber   | 3    |
| STD-WW-20              | Emergency overflow structure & emergency overflow to storm sewer   | 2    |
| STD-WW-21              | Typical ditch/stream crossing for gravity sewer (sheet 1 of 2)   | 2    |
| STD-WW-22              | Typical ditch/stream crossing for ductile iron rising main (sheet 2 of 2)  | 2    |
| STD-WW-22A             | Typical ditch/stream crossing for polyethylene rising main   | 0    |
| STD-WW-23              | Typical bridge crossing for rising main (sheet 1 of 2)   | 2    |
| STD-WW-24              | Typical bridge crossing for rising main (sheet 2 of 2)   | 2    |
| STD-WW-24A             | Typical culvert and services crossing details for rising main  | 0    |
| STD-WW-25              | Security gate & fencing palisade option (preferred)  | 0    |
| STD-WW-25A             | Security gate & fencing wire mesh option   | 3    |
| STD-WW-26              | Indicative pumping station site layout – access via lay-by   | 1    |
| STD-WW-26A             | Indicative pumping station site layout – direct access from public road  | 0    |
| STD-WW-27              | Flow meter chamber (foul rising main ≤200mm dia.) cast in-situ concrete option   | 3    |
| STD-WW-27A             | Flow meter & valve chamber (foul rising main ≤200mm dia.) cast In-situ concrete option   | 0    |
| STD-WW-27B             | Flow meter & valve chamber (foul rising main ≤200mm dia.) pre-cast concrete option   | 0    |
| STD-WW-27C             | Flow meter & valve chamber (foul rising main ≤200mm dia.) pre-cast concrete option   | 0    |
| STD-WW-28              | Cast in-situ Indicative submersible pumping station  | 3    |
| STD-WW-28A             | Indicative pre-cast concrete submersible pumping station with cast in-situ valve chamber   | 2    |
| STD-WW-28B             | Indicative pre-cast concrete submersible pumping station and pre-cast valve chamber  | 0    |
| STD-WW-29              | Rising main discharge stand-off manhole  | 3    |
| STD-WW-30              | Type 1 pumping station control klosk   | 3    |
| STD-WW-30A             | Type 2 and type 3 pumping station control kiosk  | 0    |
| STD-WW-30A             | Pumping station wet kiosk  | 3    |
| STD-WW-31A             | Pumping station wet klosk water service connection arrangement   | 0    |
| STD-WW-31A             | Hardstanding area pumping station (permeable & impermeable)  | 2    |
| STD-WW-32<br>STD-WW-33 | Lamp bollard & lamp standard   | 2    |
| STD-WW-34              | Vent stack   | 2    |
| STD-WW-35              | Rising main rodding chamber in-situ concrete option  | 0    |
| STD-WW-35A             |  | 0    |
| STD-WW-36              | Rising main rodding chamber pre-cast concrete option  Marker posts/plates  | 0    |
|                        | Section showing wastewater services separation details in high density developments 2.5m wide footpaths with 6.0m wide   |      |
| STD-WW-37              | carriageway  Layout plan showing below ground services separation details in high density developments 2.5m wide footpaths with 6.0m wide                            | 0    |
| STD-WW-38              | carriageway  Section showing wastewater services separation details in high density developments 1.8m wide footpaths, 2.5m wide parallel parking bays with 6.0m wide | 0    |
| STD-WW-39              | carriageway.   | 0    |

|---|------------------------|---|---|--|---|---------------------------------------|-----------------------------|
| Typical Bridge and Culvert Crossing for Rising Mains. | STD-WW-24<br>& STD-WW- | The construction of bridge and culvert crossings by a rising main (continued) | Pollution to the environment                        | Personnel / IW<br>Operations /<br>General Public | shown on STD-WW-23. The air valve is to be located in a kiosk off the footpath so as not to impede pedestrians.  Pipework to the air valve shall be via a 32mm O.D. polyethylene pipe. The pipe shall be connected to the main via a 35mm saddle.  The kiosk shall be constructed from hot dipped thermostetting UV and weather resistant plastic powder coated galvanised mild steel plate (min. 4mm thickness) to BS EN 1461, Colour to be holly green 14 C 39 in accordance with BS 4800. The kiosk shall be fitted with a hinged lockable access door (hinges and locks to be stainless steel).  Exposed pipework within the kiosk to be insulated with pipe lagging.  A scour valve, chamber and head wall to be installed for the crossing shown on STD-WW-24. (Note: Refer to drawing STD-WW-15 for the Designers Risk Assessment regarding the scour valve chamber and head wall construction).  The Standard Detail refers the Developer to STD-WW-14 which, details thrust block arrangements to be implemented.  Pipework at the crossing point shown on STD-WW-24 shall be polyethylene joined using butt fusion welding, shall be wrapped in plastic sheeting in accordance with BS 6076 and surrounded in concrete.  Pipework at the crossing point shown on STD-WW-23 over the bridge deck shall be ductile iron and shall be wrapped in plastic sheeting in accordance with BS 6076 and surrounded in concrete.  The Developer shall seek advice from Irish Water as to whether a duplicate main is to be provided at the bridge crossing. If necessary the Developer shall submit a design to Irish Water for agreement.  The reinstatement and the backfill requirements of the river bed and bank shall be subject to Irish Water agreement. | Significant                           |                             |

Site specific design risks assessments to be prepared for all designs. Design Coordination required by a competent PSDP. |  |              |   |       |
|                         |                |   |   |   |   | Site specific method statements and risk assessments detailing safe means of works for working in close proximity to existing underground and overground live power lines shall be prepared by the Developer.   |  | Irish Water Connections & Developer Services Team to vet the design submitted by the Developer and may require its amendment if deemed inadequate. |              |   |       |
|                         |                |   |   |   |   |   |  | Mis-information  | Operations / | Marker plates shall inform of valve type, location and diameter of the watermain (Note: pipe diameter on hydrant plate to refer to the watermain not the branch). | Minor |
|                         |                |   |   | General Public                                      | Marker plates to be manufactured in accordance with BS 3251   |   | Irish Water Connections & Developer Services Team will also Vet the final installed infrastructure.  |  |              |   |       |
|                         |                |   | Moving Traffic  | Construction Personnel / IW Operations /            | Site specific risks to be assessed and detailed traffic management plan developed.  Where possible marker plates are to be fixed to adjacent walls.   | Significant   | The Developer shall prepare site specific Risk Assessments and Method Statements for all risks and detail site specific control measures to be put in place                    |  |              |   |       |
|                         |                |   |   | Striking<br>underground /<br>overground<br>services | Construction<br>Personnel / IW<br>Operations /  | It is the responsibility of the Developer to contact the relevant utility providers in order to establish their respective requirements. Evidence of consultation with relevant utility providers shall be provided to Irish Water at Design Stage.  Site specific method statements and risk assessments detailing safe means of works for working in close proximity to existing underground and overground existing services shall be prepared by the Developer. | Significant  | in order to reduce the risks to an acceptable level.   |              |   |       |

## Design Risk Assessment Wastewater Standard Details

Revision: v4.02

|             | Residual Risk Rating:  |  |  |  |  |  |  |  |  |
|-------------|--|--|--|--|--|--|--|--|--|
| Significant | A significant risk to the health and safety of personnel/surrounding environment still exists after the design process which is required to be considered by the detailed designer at detailed design stage and the contractor during the construction stage |  |  |  |  |  |  |  |  |
| Minor       | A minor risk to the health and safety of personnel/surrounding environment still exists after the design process which is required to be considered by the detailed designer at detailed design stage and the contractor during the construction stage       |  |  |  |  |  |  |  |  |
| Eliminated  | Hazard has been eliminated during the design process   |  |  |  |  |  |  |  |  |
